(Column 1)	(Column 2)	(Column 3)
CLAIMS		
1. A method of determining the relative amounts of the components of a mixture, comprising: (a) measuring the intensity of the peaks in the chromatogram of the mixture; (b) comparing the measured intensities with the intensities of the peaks in the chromatogram of a standard mixture; and (c) determining the relative amounts of the components of the mixture based on the comparison.		
2. The method of claim 1, wherein the measured intensities are measured by a gas chromatograph-mass spectrometer (GC-MS).		
3. The method of claim 1, wherein the measured intensities are measured by a gas chromatograph-mass spectrometer (GC-MS) using a selected ion monitoring (SIM) method.		
4. The method of claim 1, wherein the measured intensities are measured by a gas chromatograph-mass spectrometer (GC-MS) using a full scan method.		
5. The method of claim 1, wherein the measured intensities are measured by a gas chromatograph-mass spectrometer (GC-MS) using a data-dependent method.		
6. The method of claim 1, wherein the measured intensities are measured by a gas chromatograph-mass spectrometer (GC-MS) using a data-independent method.		
7. The method of claim 1, wherein the measured intensities are measured by a gas chromatograph-mass spectrometer (GC-MS) using a data-dependent method and a data-independent method.		
8. The method of claim 1, wherein the measured intensities are measured by a gas chromatograph-mass spectrometer (GC-MS) using a data-dependent method and a data-independent method, and the data-dependent method is a selected ion monitoring (SIM) method.		
9. The method of claim 1, wherein the measured intensities are measured by a gas chromatograph-mass spectrometer (GC-MS) using a data-dependent method and a data-independent method, and the data-independent method is a full scan method.		
10. The method of claim 1, wherein the measured intensities are measured by a gas chromatograph-mass spectrometer (GC-MS) using a data-dependent method and a data-independent method, and the data-dependent method is a selected ion monitoring (SIM) method and the data-independent method is a full scan method.
